How to…

Find Large Images on Google

1) Open your web browser and go to google.

2) Type in what it is you are searching for an image of and press ‘enter’ on your keyboard.
3) Go to the ‘images’ tab to view the image search results.

4) Click on the ‘tools’ option to reveal a set of search options.

5) Click on the ‘size’ tab to reveal a drop down menu and from this select ‘large’. This will filter the search and only show you large image files. Using large image files is important as smaller files can become pixilated.
6) When you hover for cursor over the image, it will tell you exactly how large the image is, allowing you to make an informed choice.
